Plan prepared by doctor or nurse practitioner (np):

The treating doctor or np hereby authorises:

- Medications specified on this plan to be administered according to the plan.
- Use of adrenaline autoinjector if available.
- Review of this plan is due by the date below.

Date: _____

Signed: _____

Date: _____

Note: This ASCIA Action Plan for Allergic Reactions is for people with mild to moderate allergies, who need to avoid certain allergens.

For people with severe allergies (and at risk of anaphylaxis) there are red ASCIA Action Plans for Anaphylaxis (brand specific or generic versions) for use with adrenaline (epinephrine) autoinjectors.

Instructions are on the device label.

Adrenaline autoinjectors (300 mcg) are prescribed for children over 20kg and adults. Adrenaline autoinjectors (150 mcg) are prescribed for children 7.5-20kg.

SIGNS OF MILD TO MODERATE ALLERGIC REACTION

- Swelling of lips, face, eyes
- Hives or welts
- Tingling mouth
- Abdominal pain, vomiting (these are signs of anaphylaxis for insect allergy)

ACTION FOR MILD TO MODERATE ALLERGIC REACTION

- For insect allergy - flick out sting if visible
- For tick allergy seek medical help or freeze tick and let it drop off
- Stay with person and call for help
- Give other medications (if prescribed).....
- Phone family/emergency contact

Mild to moderate allergic reactions (such as hives or swelling) may not always occur before anaphylaxis

WATCH FOR ANY ONE OF THE FOLLOWING SIGNS OF ANAPHYLAXIS (SEVERE ALLERGIC REACTION)

- Difficult/noisy breathing
- Swelling of tongue
- Swelling/tightness in throat
- Wheeze or persistent cough
- Difficulty talking and/or hoarse voice
- Persistent dizziness or collapse
- Pale and floppy (young children)

ACTION FOR ANAPHYLAXIS

1 Lay person flat - do NOT allow them to stand or walk

- If unconscious, place in recovery position

- If breathing is difficult allow them to sit

2 Give adrenaline (epinephrine) autoinjector if available

3 Phone ambulance - 000 (AU) or 111 (NZ)

4 Phone family/emergency contact

5 Transfer person to hospital for at least 4 hours of observation

If in doubt give adrenaline autoinjector

Commence CPR at any time if person is unresponsive and not breathing normally

ALWAYS give adrenaline autoinjector FIRST if available, and then asthma reliever puffer if someone with known asthma and allergy to food, insects or medication has **SUDDEN BREATHING DIFFICULTY** (including wheeze, persistent cough or hoarse voice) even if there are no skin symptoms

Asthma reliever medication prescribed: Y N

- If adrenaline is accidentally injected (e.g. into a thumb) phone your local poisons information centre.
- Continue to follow this action plan for the person with the allergic reaction.
